New Plantronics Savi W700 3 in 1 System

The spread of Unified Communications has fueled a need for consolidated hands-free communication across the devices used within the course of the working day (desk phone, PC and mobile phone).

Multiple devices. Singular control. The new Plantronics Savi 700 series is changing the way productivity-focused office professionals communicate.

With multi-device connectivity, a newly designed convertible headset, and up to 350 feet of wireless range, now you can easily manage **PC, mobile and desk phone** calls with the most intelligent wireless headset system on the market.

Plantronics is in the process of transitioning the current Savi Office product lines. The new products are industry leading products with unique technology and features that will greatly benefit The Headset Team customers.

Quote of the Month

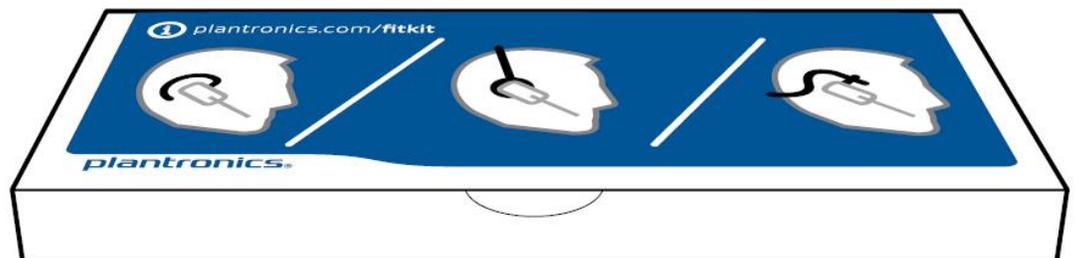

"You must do the things today that others will not do so that you can have the things tomorrow that others will not have."

-- Anonymous

Three comfort tested wearing styles(Savi 740):

- » Over-the-ear with S,M,L earloops and S,M,L, dome eartips
- » Over-the-head with leatherette ear cushion
- » Behind-the-head with S,M,L, dome eartips

W740 Headset fit kit with earloops, eartips and foam sleeve

Savi W700 Series Frequently Asked Questions

How can the talk time be 'unlimited' with the Savi 740?

Savi 740 features a hot swappable battery that can provide the user with **unlimited talk time**. The Savi 740 has a series of accessory options to provide this functionality. Savi 740 can give up to 7 hours of talk time on a single charge which is sufficient for the majority of users.

What is adaptive power and why is it a benefit in the office?

DECT wireless technology can give you a range up to 350 ft. in the office environment, but there is a limit to the number of concurrent users and this is called "user density". The adaptive power feature detects how far you are from the base unit and turns the DECT radio power down to match your distance. Therefore the closer to the base unit the less radio power is emitted. This has two benefits, you can have more DECT users in the same area (better user density) and the headset uses less battery power thus improving talk and

standby time.

What is audio benefit of wideband over narrowband?

Traditional desk phones are limited in their audio bandwidth (300 to 3.6KHz). As a comparison the human voice has a bandwidth of approximately 100 to 5KHz so the very low and high voice frequencies are lost making you sound less natural. More modern telephones such as IP desk phones and PC softphones enable a much wider range of voice frequencies to be transmitted and received. Current mobile phones in the market only support narrowband audio.

Can I mix audio and conference in other wireless headsets with the new Savi 700 series like I could with Savi Office?

Yes, you can mix audio between any two of your three phone devices at a given time. As for conferencing guest headsets, if they have the same style of headset your guest can simply dock their headset in your cradle to join your call. If they have a different style of headset they can also join your call using over the air subscription process as detailed in the full user guide. You can conference with up to 3 additional Savi Headsets and the guests can now stay on through multiple calls.
